**vibers™ paper** is made from Elephant grass.

Elephant grass grows on local soil, on fallow land and is a very special plant.

It takes up 4 times more CO<sub>2</sub> than a forest with trees, grows on poor soil, without the use of pesticides and needs little water.

Our paper is also made locally. So it only needs to travel a short distance until it's at your place. In this way we make use of the local manufacturing industry and as little transport as possible.

**You have something special in your hands...**

# Made from locally grown Elephant grass
